PROFILE

Software Engineer and Requirements Engineer with experience in analyzing business processes and translating operational needs into practical system solutions. Currently working at Al Qimam Holding, supporting CRM operations and designing Odoo-based systems for kitchen operations, after-sales service, installations, and delivery. Experienced in full-stack development, database management, dashboards, workflow automation, and bridging the gap between business teams and technical implementation.

SKILLS

BUSINESS & ERP

- Requirements Gathering & Analysis
- Business Process Analysis
- Workflow Design
- Odoo Functional Analysis and Customization
- CRM Operations and Process Improvement
- Dashboard and Reporting Requirements

TECHNICAL

- Odoo Development and Customization
- Python and Odoo ORM
- React, JavaScript
- Node.js, Express.js
- MySQL, MongoDB, PostgreSQL

WORK EXPERIENCE

Requirements Engineer & CRM Specialist | Al Qimam Holding | 2025–Present

- Gather and analyze business requirements from operational departments and translate them into clear system workflows and functional requirements.
- Design and develop Odoo-based solutions to support kitchen operations, after-sales services, installations, and delivery processes.
- Map business processes, define system fields, user roles, permissions, statuses, and approval workflows.
- Coordinate between business users and technical implementation to ensure system requirements are correctly understood and delivered.
- Support CRM operations and improve customer-related processes across service departments.
- Create dashboards, reports, and operational views to help managers monitor performance, service requests, and workflow progress.
- Test system functionality, identify gaps, document issues, and follow up on required improvements.

Full-Stack Developer | BigBang | 2023–2025

Project: Tiffany Flowers Website

- Redesigned and improved the website interface, including layouts, colors, typography, spacing, and responsive behavior.
- Improved consistency across the website to enhance user experience and maintain the brand identity.

React Developer | Luminaire Marketing Solution | 2020–2023

Project: Game Over Store Management System

- Developed inventory management features to track stock quantities, locations, reorder thresholds, and stock movements.
- Designed sales tracking functionality to monitor sales and inventory levels in real time.

Project: La Casa Pizza Management System

- Developed a cashier interface for order processing, menu item selection, customization options, and payments.
- Created a real-time dashboard to monitor incoming orders, order queues, and status updates.
- Designed a menu management system for updating menu items, prices, and descriptions.

EDUCATION

Associate Degree in Computer Science

University of the People | 2023
